

Table of Contents

Preface

- Intended Audience
- Approach
- Features
- Chapter Overview
- Acknowledgments
- About the Author

Chapter 1: Introducing Computer Programming

- Introduction
- What is a computer program?
- What do programmers do?
- The software development life cycle
- The importance of writing and communicating
- What are programming languages?
- Compilers and Interpreters
- So many languages!
- Standalone and Network Applications
- Markup Languages
- Combining markup and programming languages
- Summary
- Chapter 1 Review Questions

Chapter 2: Client/Server Applications - Getting Started

- Introduction
- Client/server design in Web applications
- Working with files and folders
- Locating files and folders on computers running a Windows operating system
- Locating files and folders on the Internet
- Working with a local Web server
- What languages will I use?
- What software will I need?
- Installing XAMPPLite in Windows
- Installing Crimson Editor
- Installing Mozilla Firefox
- Running your Web server on Windows
- Using URL's with your Web server
- Always use URL's to run your Web applications!
- Where to save your files
- The importance of frequent backups
- Creating an HTML document
- Creating a PHP program

Creating an interactive HTML and PHP program
Summary
Chapter 2 Review Questions

Chapter 3: Program Design - from Requirements to Algorithms

Introduction
What are instructions?
Common characteristics of instructions
Sequence, selection and repetition structures
A programming example
Creating an Input, Processing, Output (IPO) chart
Designing the user interface
Developing an algorithm
A smoking calculator
Coding the application
Summary
Chapter 3 Review Questions
Chapter 3 Code Exercises

Chapter 4: Basics of Markup - Creating a User Interface with HTML

Introduction
A short history of HTML
Introducing HTML tags
Ignoring white space
More HTML tags
Introducing HTML tables
Using HTML tables to layout Web pages
Other HTML tags
Introducing style sheets
Multiple styles for a single tag
Selecting colors for fonts and backgrounds
Referencing a style sheet in your HTML document
Applying a style sheet to multiple pages
A note about Information Architecture
Interactive user interfaces
Creating HTML forms
Using HTML forms to obtain user input
Problems with form submission
Drop down lists
Combining textboxes and drop down lists
Other types of input
Stylesheets and forms
Summary
Chapter 4 Review Questions
Chapter 4 Code Exercises

Chapter 5: Creating a Working Program - Basics of PHP

Introduction

Why PHP?

Working with HTML and PHP

Important features of client/server programs

Receiving input from a form – wage2.php

Processing the smoking survey – smoking.php

PHP - general guidelines and syntax

Arithmetic expressions

Using arithmetic functions

White space in PHP files

Generating HTML output from PHP

Using multiple PHP sections

Using the number_format() function to display numbers to a specific number of places

Finding syntax errors

Finding logical errors

Summary

Chapter 5 Review Questions

Chapter 5 Code Exercises

Chapter 6: Persistent Data - Working with Files and Databases

Introduction

The difference between persistent and transient data

Files and databases

Working with a text file

Closing a text file

Reading data from a text file

PHP functions to read data from a text file

Writing data to a text file

PHP functions to write data to a text file

Be careful to avoid security holes!

Using escape characters

Using PHP to append data to files

Processing files that contain complete records on each line

PHP functions to parse a delimited character string

Processing a file with multiple records

Appending records to a file

Working with multiple files

Summary

Chapter 6 Review Questions

Chapter 6 Code Exercises

Chapter 7: Programs that Choose – Introducing Selection Structures

Introduction

Introducing if and if .. else structures

- Boolean expressions and relational operators
- Selection using the IF structure
- Testing threshold values
- Selection using the if..else structure
- When to use braces in if..else statements
- Comparing strings – testing for a correct password
- Ignoring the case of a character string
- Providing a selective response
- Using selection to construct a line of output
- Summary
- Chapter 7 Review Questions
- Chapter 7 Code Exercises

Chapter 8: Multiple Selection, Nesting, AND's and OR's

- Introduction
- Creating a program with multiple but independent selection structures
- Validating user input
- Introducing the logical operators AND and OR
- Using the OR operator to validate input
- Nested selection structures
- Chaining related selection structures
- A special case: the switch statement
- Introducing the NOT operator
- Additional input validation
- More about input validation: using the trim() function
- Using the AND operator to assign a bonus
- When to use AND or OR? Be careful with your logic!
- The challenge of software testing
- More examples in the samples folder
- Some words of encouragement
- Summary
- Chapter 8 Review Questions
- Chapter 8 Code Exercises

Chapter 9: Programs that Count - Harnessing the Power of Repetition

- Introduction
- Controlling a loop by counting
- General syntax of a for loop
- Including the counting variable in your loop statements
- Using a variable to control the loop condition
- Converting from Celsius to Fahrenheit
- Changing the increment value
- Using Loops with HTML tables
- Allowing the user to control the loop
- Improving processing efficiency
- Using loops to "crunch numbers"

Using a loop to accumulate a total
Finding the total and average from a file of numbers
Finding the highest and lowest values in a series
Performing multiple operations on a file of numbers
Nesting if..else structures to customize output from a loop
Loops within loops – creating a bar chart
Selecting from a list of data files
Summary
Chapter 9 Review Questions
Chapter 9 Code Exercises

Chapter 10: "While NOT End-Of-File" - Introducing Event-Controlled Loops

Introduction
Characteristics of while loops
The structure of while loops
An algorithm to process files of unknown length
Using a while loop to process a file of scores
Including selection structures inside a while loop
Using a while loop to count, sum and average data
Using a while loop to process a file of records
Processing weekly wages from a file of timesheet records
Processing selected records from a file of timesheet records
Processing selected fields from a file of records
Processing a file of survey data
Using do..while or repeat..until loops
Summary
Chapter 10 Review Questions
Chapter 10 Code Exercises

Chapter 11: Structured Data – Working with Arrays

Introduction
What is an array?
Working with array elements
Extending an array
Displaying array values
Receiving scores into an array from an HTML form
Arrays of strings
How large is the array?
Why do array indices begin with 0 and not 1?
Using FOR loops with arrays
Using the sizeof() function to control a FOR loop
Summing and averaging the values in an array
Counting selected values in an array
Multiple operations on an array
Reading data from a file into an array
Reading data into an array from a file of unknown length

- A special loop for processing arrays – foreach
- Associative arrays and hashes
- Associative arrays and the foreach loop
- More about the \$_POST array
- Web Sessions and the \$_SESSION array
- Associating multiple pages with a Web session
- Creating, initializing and modifying session variables
- Destroying the session
- Managing a Web session
- Putting it all together
- Multi-dimensional arrays
- Summary
- Chapter 11 Review Questions
- Chapter 11 Code Exercises

Chapter 12: Program Modularity – Working with Functions and Objects

- Introduction
- Using functions
- Understanding function arguments
- Receiving values from a function
- Researching available functions
- Creating your own functions
- Creating a library of functions
- Including functions from external files
- Using the same functions in different programs
- Learning to think beyond specific applications
- More about include files
- Introducing Object Oriented Programming (OOP)
- Creating and using instances of an object class
- The importance of OOP
- Important OOP terms and concepts
- Summary
- Chapter 12 Review Questions
- Chapter 12 Code Exercises

Chapter 13: In Conclusion..

- Introduction
- Moving forwards with PHP and XHTML
- PHP and other languages
- Web design and markup
- The Importance of OOP
- Development tools and modeling languages
- Client/server and server/server programming
- GUI programming and interface design
- Database programming and SQL
- Summary

Appendix A: Data Representation and Formats

Introduction

Storing data in bits and bytes

How multimedia data is represented in binary

How numeric values are represented in binary

How plain text is represented in binary

How source code and markup code is represented in binary

How program instructions are represented in binary

How memory addresses are represented in binary

What else can be represented in binary?

Appendix B: Files, Folders, Addressing Schemes, and Command Line Arguments

File types and file extensions

Disk and Disk Drives

Files and File Folders (Directories)

Naming Files and Folders

File Addresses in Windows and on the Web

Relative Addresses in Windows

Relative Addresses on the Internet

Using Relative Web Addresses in HTML code

Managing Files at the Command Line

Introduction to MS DOS Commands

Recalling Previous Commands

Use double quotes when paths include spaces

Printing the contents of the console window

Creating batch files

Unix commands

Appendix C: Installing and Running xamppLite

Do you already have access to a Web server?

Information and help regarding your xamppLite installation

Problems with installation

Adding the coursework and samples folders to your Mac OS X or Linux installation

Editing your files

Text editors for Macintosh and Linux

Appendix D: Debugging Your Code

Problems viewing your HTML or PHP programs

Problems with HTML layout

Locating PHP syntax errors

Common PHP syntax errors

Common logical errors

Appendix E: More about HTML and CSS

Useful HTML References

- Useful CSS References
- Useful Color References
- Inline styles and internal style sheets
- Deprecated HTML tags and XHTML standards
- Frequently asked questions regarding HTML tags

Appendix F: More About PHP

- Useful PHP references
- Use PHP print or echo?
- Multiple PHP sections
- Should I use .html or .php files?
- Consistent file names
- Program variables and the \$_POST array
- Form-processing best practices
- Camelback notation
- More about PHP functions
- Standard PHP array functions
- PHP data types

Appendix G: Additional Topics

- Shortcut operators
- Switch structure
- Another loop structure: do..while
- Multi-dimensional arrays
- Ragged arrays
- Multi-dimensional associative arrays
- Using the foreach loop with associative arrays
